

# Recover, Improve and Extend Product Design

The advantages of low cost part sources are often offset by the loss of mechanical properties and reproduceability plus the extra costs of secondary operations.

Itek can introduce complex design details to reduce secondary operations, to improve the mechanical performance and to reduce the costs of assembly.

Itek can custom color the plastic to improve the appearance plus eliminate the cost of painting.

Itek can help to overcome many drawbacks and recover profits by lowering the total cost, in addition to improving the product performance and extending the product life.
